

VENSCURO ROLLER BLINDS FOR GALLEYS, BARS AND CREW REST COMPARTMENTS

Decorative Products GmbH and Texat decor engineering AG offer airlines a customised roller blind solution for galleys, bars and crew rest compartments.

The Venscuro Rollerblind is an innovative solution for the visual protection of galley's in aeroplanes that combine both functionality and aesthetics. Developed to meet specific requirements of the aviation industry, Venscuro offers an effective way of regulating light and visibility while making optimum use of space. Venscuro Rollerblinds are manufactured of high-quality and easy-to-clean materials that meet fire protection requirements of the aviation industry. It offers a compact and modern design, an appearance adapted to customer requirements in terms of color and dimensions, which seamlessly integrates into the galley.

The user-friendly roller mechanism in conjunction with the cable-guided handle enables convenient and smooth operation even in confined spaces.

Venscuro, the cable-guided roller blind

The cable-guided roller blind offers the possibility of covering areas from 700 – 2500 mm. A technical solution has also been developed so that the roller blind can be used for horizontal operation. It comes along with a specially designed cover to protect the bottom guide rail. Other features of this latest solution are privacy protection without any lateral light incidence or view.

In addition, Venscuro offers a wide range of adjustable options, including operating force, fabric tension and parallelism, making it impossible to tilt or jam the handle and thereby impair operation.
